Scott,

Funny you would send this yesterday. I attended Quinns class yesterday as part of his pre-CFS process and got to see him in action. He is not only a great progressing teacher, he is a disciple builder. I arrived early and just watched him interact and visit with his students before class. He not only knows their names, he knows who they are. We are blessed to have him in the college and I'm blessed to share the same 'hood with him :)

Hi David, Greg, and Sid:

I have no direct stewardship for his pre-CFS process any longer, but I wanted to give a brief update on Quinn Briggs (cc'd) from my perspective.

We are coming up on the end of his second year here, and already Quinn has become an invaluable member of our department and team. Through his insight, initiative, and natural leadership qualities, he has taken an active role in the course councils for each course that he has been involved in. This has been especially critical in our Software Testing and Software Lifecycle Methods courses where he is using his extensive industry experience to help us update materials and modernize the approach we are taking.

I am also seeing this firsthand in my work with the Online Worldwide Block (BYU-Pathway) program. Quinn is working directly with Craig Lindstrom on the Software Testing (CSE 270) course that we are building right now. In addition to developing assignments and activities, Quinn has essentially written a new OER "textbook", if you will, that will dramatically reduce the required reading for the course and at the same time, give us content that we own, so we can translate it into Portuguese and Spanish.

In addition, he is playing a huge role in helping me develop a new Software Engineering Principles course (CSE 370) that will pilot in the Fall. This course is also requiring us to create our own source content and case studies. I cannot overstate the value of his industry experience, insight, and judgment as we develop this new course.

Like most people in our department, he is probably working too hard =), but his contributions have been amazing, and, while I'm not as involved on the classroom side, I also hear great things second-hand from students in his classes.

We are very fortunate to have him on the team!!

Scott

Scott,

This is such great feedback. Thank you for sharing. I love hearing about the amazing things our faculty members are doing; especially our new faculty. We are blessed to have him here and blessed to have great colleagues like you who share the goodness they see in others!

With appreciation,

Sid
